INGEX QR SOFTWARE

Detailed Screen-by-Screen Prototype Description

Proposed Approach

Option 2 – QR Code with Secure Web-Based Product Information

The following screen descriptions explain the proposed prototype flow of the INGEX QR Software. The purpose is to give the vendor a clear understanding of what each screen should contain and how the screens should be connected.

---

1. LOGIN SCREEN

Purpose

The Login screen will be the first screen of the Admin Portal. Only authorized users should be able to access the administration system.

Screen Content:

The screen should contain:

- INGEX logo.
- Application name.
- Username or Email field.
- Password field.
- Login button.
- Forgot Password option.

User Flow:

The user enters their login credentials and clicks **Login**.

If the credentials are valid:

Login → Dashboard

If the credentials are invalid, an appropriate error message should be displayed.

Prototype:

For the prototype, the Login button can directly take the user to the Dashboard.

2. DASHBOARD SCREEN

Purpose

The Dashboard will provide an overall view of the QR software. It should allow the administrator to quickly understand the current status of products, QR codes and QR scan activity.

Screen Content:

The Dashboard should display summary information such as:

- Total Products.
- Total QR Codes Generated.
- Active Products.
- Total QR Scans.
- Recent Product Activities.

Recent Activity:

The dashboard can also display activities such as:

- New product added.
- Product information updated.
- QR code generated.
- QR code scanned.

Navigation:

The left-side menu can contain:

Dashboard

Products

QR Codes

Reports

Users

Settings

Logout

Button Actions:

Products → Product Management

QR Codes → QR Management

Reports → Reports

Users → User Management

Settings → Settings

3. PRODUCT MANAGEMENT SCREEN

Purpose

This screen will be used by the administrator to manage all products registered in the system.

Screen Content:

The screen should display a list/table of products.

Example:

Product Name | Product Code | Batch | Status | QR Status | Action

The administrator should be able to search for a particular product.

Search

A search box can be provided:

Search Product / Product Code / Batch

Filters

The administrator can optionally filter by:

- Product Category.
- Product Status.
- Batch.
- QR Status.

Main Button

+ Add Product

This button will take the user to:

Add Product Screen

Actions for Each Product

Each product can have:

View → Product Details

Edit → Edit Product

QR → QR Details

Prototype Flow

Dashboard → Products → Product Management

4. ADD PRODUCT SCREEN

Purpose

This screen will allow the administrator to enter and save a new product in the system. This is one of the main screens because the product information entered here will later be displayed when the customer scans the QR.

Basic Product Information:

The screen should contain fields such as:

- Product Name.
- Product Code.
- Product Category.
- Product Description.

Product Information:

Additional information can include:

- Batch Number.
- Manufacturing Date.
- Expiry Date.
- Product Colour.
- Product Type.

Product Image:

The administrator should be able to upload a product image.

Product Specifications:

The system can provide a section to enter different specifications.

Example: Specification	Value
Weight	500g
Material	XXXXX

An **Add Specification** button can be provided to add additional specifications.

Additional Information:

Depending on the final requirements, the administrator can enter:

- Usage Instructions.
- Storage Instructions.
- Safety Information.
- Other product-specific information.

Buttons:

Cancel

→ Return to Product Management.

Save Product

→ Save the product and open Product Details.

Save & Generate QR

→ Save the product and move to QR Generation.

Prototype Flow:

Products → Add Product → Save & Generate QR → QR Generation

5. PRODUCT DETAILS SCREEN

Purpose

This screen will display all the information related to a particular product. It will allow the administrator to review the information before generating or managing the QR.

Screen Content:

The screen should display:

- Product Image.
- Product Name.
- Product Code.
- Category.
- Batch Number.
- Manufacturing Date.
- Expiry Date.
- Product Description.
- Product Specifications.

Main Actions:

Edit Product

Allows the administrator to change the product information.

→ **Edit Product Screen**

Generate QR

Allows the administrator to generate the QR for the product.

→ **QR Generation Screen**

View QR

Allows the administrator to view the existing QR.

→ **QR Details Screen**

Prototype Flow:

Product Management → Product Details

From Product Details:

Edit → Edit Product

Generate QR → QR Generation

View QR → QR Details

6. QR GENERATION SCREEN

Purpose

This is one of the most important screens in the system. The administrator will use this screen to generate a unique QR code for the selected product.

Screen Content:

The screen should show the selected product information:

- Product Name.
- Product Code.
- Batch Number.
- Product Status.

The generated QR code should be displayed clearly.

Secure URL:

Since the selected approach is **Option 2 – Secure Web-Based Product Information**, the QR will point to the relevant product page through a secure URL.

For example:

https://qr.ingexlabs.com/product/ING-001

Important Concept:

The QR does not need to contain all the product information directly. Instead, the QR will contain a unique reference/link that connects the customer to the product information stored in the system. This allows the product information to be centrally managed and updated when required.

Buttons:

Generate QR

→ Generate the QR.

Download QR

→ Download the generated QR.

Print QR

→ Open Print Preview.

View Product

→ Return to Product Details.

Prototype Flow:

Product Details → Generate QR → QR Generated → Download / Print

7. QR CODE MANAGEMENT SCREEN

Purpose

This screen will provide a central list of all QR codes generated by the system.

Screen Content:

The table can contain:

QR ID

Product Name

Product Code

Batch Number

Total Scans

Action

Search and Filter:

The administrator should be able to search for a QR using:

- QR ID.
- Product Code.
- Product Name.
- Batch Number.

Filters can include:

- Date.
- Product.

Actions:

View QR → QR Details

View Analytics → QR Analytics

Deactivate → Confirmation

Prototype Flow:

Dashboard → QR Codes → QR Management

8. CUSTOMER QR SCAN SCREEN

Purpose

This is the customer-facing experience. The customer will use their mobile phone to scan the QR attached to the product. The QR will open the secure web-based product information page.

Screen Design:

This screen should be designed primarily for **mobile devices**. The page should be simple and easy to understand.

The page can show:

- INGEX / Manufacturer Logo.
- Product Image.
- Product Name.
- Product Code.
- Batch Number.

At the top, a clear message can be displayed:

✓ **Product Verified**

Product Information: The customer can see the information that Ingex has chosen to make available.

This may include:

- Product Description.
- Manufacturing Information.
- Expiry Information.
- Usage Instructions.
- Storage Information.

Additional Buttons:

View Certificate

→ Certificate/document page.

Product Manual

→ Product manual.

More Information

→ Detailed product information.

Prototype Flow:

Physical Product QR → Scan → Secure Product Page

9. ANALYTICS SCREEN

Purpose

The Analytics screen will provide useful information based on QR activity. This is one of the key advantages of the selected web-based approach.

Summary Information:

The screen can show:

- Total QR Scans.
- Unique Scans.
- Active QR Codes.
- Number of Countries.
- Product-wise Scans.

Graphs:

A graph can display:

QR Scans Over Time

Another section can show:

Scans by Country

Another section can show:

Scans by Product

Filters:

The administrator can select:

- Date Range.
- Product.
- Country.
- Batch.

Export:

An **Export Report** button can be provided.

→ Reports / Download.

Prototype Flow:

Dashboard → Analytics → Apply Filters → View Data → Export

10. REPORTS SCREEN

Purpose

The Reports screen will allow authorized users to generate reports based on the available system data.

Possible Reports: The prototype can show:

1. **Product Report**

   Shows product-related information.

2. **QR Generation Report**

   Shows QR codes generated during a selected period.

3. **QR Scan Report**

   Shows QR scanning activity.

4. **Product-wise Scan Report**

   Shows scan activity for individual products.

5. **Country-wise Scan Report**

   Shows scan activity based on country.

Filters:

Reports can be filtered using:

- Date.
- Product.
- Batch.
- Country.

Buttons:

View Report

→ Report Preview.

Export Excel

→ Download Excel report.

Export PDF

→ Download PDF report.

Prototype Flow:

Reports → Select Report → Apply Filters → View Report → Export

11. USER MANAGEMENT SCREEN

Purpose

This screen will allow administrators to manage users who have access to the Admin Portal.

Screen Content:

The table can show:

- User Name.
- Email.
- Role.
- Status.
- Created Date.

Buttons:

Add User

→ Add User.

Edit

→ Edit User.

Deactivate

→ Deactivate User.

Possible Roles:

The prototype can show:

- Administrator.
- Manager.
- Viewer.

The actual roles and permissions will be finalized based on Ingex's requirements.

12. SETTINGS SCREEN

Purpose

The Settings screen will contain system-level configuration options.

Possible Sections:

1. **General Settings**

   Company information and basic application settings.

2. **QR Settings**

   QR-related configuration.

3. **Security Settings**

   Password and access-related settings.

4. **Notification Settings**

   System notifications, if required.

Button:

Save Changes

→ Save the updated settings.

---

13. LOGOUT

Purpose

The Logout option will be available at the bottom of the Admin Portal navigation. When the user clicks Logout, a confirmation message can appear.

Are you sure you want to logout?

Cancel Logout

Logout → Login Page

MAIN PROTOTYPE JOURNEY

For the first prototype demonstration, the main journey should be:

Login

↓

Dashboard

↓

Product Management

↓

Add Product

↓

Enter Product Information

↓

Save & Generate QR

↓

QR Generation

↓

QR Generated

↓

Download / Print QR

↓

QR Attached to Product

↓

Customer Scans QR

↓

Secure Product Information Page

↓

Product Details

↓

Analytics

↓

Reports

PROTOTYPE OBJECTIVE:

The prototype should demonstrate the complete concept rather than every final functionality.

The main story should be:

1. Ingex Admin creates a product.

2. Product information is stored in the system.

3. A unique QR code is generated for the product.

4. The QR code is attached to the physical product.

5. A customer scans the QR code.

6. The customer is taken to the secure product information page.

7. The customer can view the approved product information.

8. The system can capture relevant QR activity.

9. Ingex can use the system to view analytics and generate reports.

The prototype should clearly show this journey, while features such as **Box QR, additional reports, branding options and other enhancements** can be shown as proposed/future functionality until the detailed workflows are finalized.

BOX QR SCREEN – FUTURE ENHANCEMENT

Purpose

A Box QR feature can be considered as an additional requirement based on the discussion with Ingex. The Box QR would identify a particular product box.

Example:

When a box QR is scanned:

Box ID: BOX-2026-001 Batch: B2026-001 Products Inside: 24

The system can then show the products associated with that box.

Buttons:

View Products → Products Inside Box.

Generate Box QR → Box QR Generation.

Scan Box QR → Box Verification.

Important:

The exact Box QR workflow will be finalized after reviewing the current Ingex and consumer-side workflows.
